FAQ

# FAQ NagriCoin

---

## ✔ What is NagriCoin?

NagriCoin is a project of the company of agricultural biotechnology with readymade product called Nagri and thoroughly elaborated global strategy. We produce organic fertilizers which were tested in labs and field trials all around the world. The NagriCoin team believes that you will find our project valuable due to its eco-friendliness and practical purposes.

## ✔ What is a token?

Token is a representation of a particular asset or utility, that is usually based on another blockchain. Tokens can represent basically any assets that are tangible and tradeable, from commodities to loyalty points and even other cryptocurrencies! In our case, one NGR token displays the value of one NGR coin based on the Ethereum blockchain.

## ✔ What is ITO?

ITO, or an initial token offering, otherwise known as crypto-tokens, at a price below the nominal value. In fact, it is a form of fund raising. Funds raised during the ITO, otherwise known as crowdfunding, are usually used to bring products to markets and develop business. At the same time, the crypto-token holder benefits both directly from the purchase of crypto-tokens at a discount at the early stage of crowdfunding, and potentially in the future, with an increase in the price of a crypto-token due to demand on crypto-exchanges.

Typically, a crowdfunding campaign announces the minimum amount of funds which should be raised so that ITO is considered successful. For the NagriCoin crowdfunding campaign this figure is \$500,000.

## ✔ What is NGR?

NGR is a token created on the Ethereum blockchain. We are following the standard ERC20 protocol on the Ethereum blockchain through smart contracts.

## ✔ Why are you using Ethereum?

Launched in 2015, Ethereum is a decentralized software platform that enables smart contracts and Distributed Applications (DApps) to be built and run without any downtime, fraud, control or interference from a third party. Ethereum is not just a platform but also a programming language (Turing complete) running on a blockchain, helping developers to build and publish distributed applications. The potential applications of Ethereum are wide-ranging. Therefore, we have chosen Ethereum as the most suitable platform for the NGR. The ERC20 token standard describes the functions and events that an Ethereum token contract has to implement.

# FAQ NagriCoin

---

## ✓ How to buy NGR?

You can buy NGR tokens in NagriCoin official web-wallet. You can register on our website: <https://nagricoin.io/> with your email and confirm that you accept the Terms of the Token Sale. Be sure to check out the terms of participation in the ITO! It is possible to purchase NGR tokens in exchange for the Ethereum (ETH) cryptocurrency only. A simple step-by-step video instruction of how to purchase tokens is also available on our website.

## ✓ When is the start of the ITO?

ITO start is scheduled for May 28, 2018. ITO Crowdfunding period will last for 41 days.

## ✓ How can I use the NGR after the ITO?

After the ITO, the token will be listed on cryptocurrency exchanges. Besides trading, holders of NGR tokens will be granted with annual buyback.

## ✓ Why will the demand for the NGR token grow?

NagriTech is focused on the agricultural sector and its importance in our everyday lives. We all need to eat to survive, and many do easily 2 – 3 times per day, 365 days per year, for an average of 80 years. We believe that food drives the world and that apart from clean water, access to adequate food is the primary concern for most people on the Earth. Because of this, agriculture is one of the most significant industries today.

By the end of 2017, the micro fertilizer market was estimated to reach 5.83 billion USD – and 8.81 billion USD by 2022. This suggests an average annual growth of 8.6%, with a market capacity of 1,681,100 tonnes by 2022.

According to preliminary estimates, the estimated sales volume of Nagri by the end of the first stage should reach, in the most likely scenario, approximately 12 million litres in Brazil and 6.5 million litres in the EU. Thus, Nagri sales volume at the expected average selling price of \$15 per litre will approximately reach \$255 million.

## ✓ What makes NagriCoin different among other blockchain projects?

The key advantage of NagriCoin is that these tokens are the only forms of cryptocurrency to be tied to a real sector – agriculture and land – which we believe will give more stability and lasting value when compared to other cryptocurrencies. The basic asset of this token is the Nagri product itself, which has been in development for more than 7 years. Nagri is the newest organic composite formulation of microelements and antioxidants that stimulate plant growth, which can find the broadest application in the agricultural and plant cultivation sectors around the world, increasing yields and improving the quality of almost all the crops it deals with.
